11 model neyi ifade ediyor: Her veri seti icin hedeflenen 11 model soyle: cox (Cox regresyon), cforest (conditional random forest), coxboost (gradient boosting - Cox), ctree (conditional inference tree), cv_glmnet (cross-validated elastic net), glmboost (gradient boosting - GLM), glmnet (elastic net), penalized (penalized Cox), ranger (random survival forest), rfsrc (random survival forest - alternatif implementasyon), xgboost_cox (XGBoost - Cox). Ornegin "9/11" bu 11 modelden 9'unun basariyla calistigi anlamina gelir.
